Jiahao Wang

jiahao.wang.17@ucl.ac.uk

COMP0016 System Engineering

January 18, 2019

Department of Computer Science

University College London

Current Progress:

We have finished the user registration system which was the first requirement of our client. Now we are heading towards the front end improvements and starting to transfer data from fitbit to the users dashboards. We are also researching and learning solid inrupt to allows users to have decentralized data storage

Every team member individual progress:

- **Mostafa Ibrahim:**
 - Arranged meetings with client and Kiran (3rd year students that we are building on his project)
 - Distributing tasks
- **Zhengxian Fan:**
 - Azure Deployment
- **Jiahao Wang:**
 - Researching & Learning required tools.

Next 2 weeks plan:

We were thinking about making edits of the front end as we don't like its design but we aren't sure the client agrees so we are going to ask him about this issue. We are also researching Fitbit's API for pulling data and OAuth 2.0. We would also like to finalise with the client the fact that the first requirement is done

Meetings Summary:

We had 2 meetings, one with the client where we finalised the requirements and asked for more information on a lot of other requirements. We had another meeting with Kiran (the student who build FHIR FLI Version 1.0) where we understood his code better to make further improvements.
